

# Inventory of Trees in Pugwash

1/74

Peter Duinker and students

School for Resource and Environmental Studies, Dalhousie University, October 2015

*Data Key:*

## **1. Street**

The street nearest which the measured tree is located.

## **2. Civic**

The civic address nearest which the tree is located. If civic is not included, property name is indicated.

## **3. Species**

Species is identified using the common name. If the tree could not be identified at the species level, the genus name (either English or Latin) is given followed by “sp.”.

## **4. DBH**

Diameter at breast height, which is the standard method for measuring the diameter of the trunk of a tree at 1.3 metres from the ground.

## **5. Comments**

“Same tree, 1 of 2:” Indicates the occurrence of multiple tree trunks on a single tree (Figure 1).

“Coppice:” Indicates where there are multiple small tree trunks growing in a cluster from the ground, in which case only the largest tree trunk was measured.

Figure 1: Multiple tree trunks on a given tree, in which case there will be more than one DBH measurement.
